COOLTOUCH LASER CONSENT

I have been fully explained this procedure by Dr. Afshin Rahimi. I realize that no promises or guarantees have been made. Unlike other laser treatments, the CoolTouch laser protects your outer skin and sensitive nerve endings with a unique cooling spray, then uses precise laser pulses to stimulate cells called fibroblasts which produce the natural collagen which is the foundation of your skin. The laser pulse of light penetrates the skin to a depth of about 3mm. As a result, the normal tissue of the outer layer of skin is only slightly affected.

The CoolTouch is used for wrinkles and scars. Because of the gentle nature of the treatment, 6 sessions one month apart are necessary.

I have been told of the following risks:

1. Pain: feels like a "rubber band" snapping against the skin.
2. Hive-like swelling: can use ice.

Very unlikely risks: less than 1%

1. Crust or blister: may need to use a topical antibiotic.
2. Scarring: rarely may leave a lighter area.
3. Pigment changes: you must protect the area from sun exposure.
